

# Postpartum Contraception and COVID-19

Katharine White, MD, MPH

*Director, Fellowship in Family Planning  
Boston Medical Center*

*Principal Partners in Contraceptive Choice &  
Knowledge*

*Investigator*

# COVID-19 is affecting contraception provision

## Difficult to access postpartum contraception

- Tubal ligation = “elective surgery”
- Early discharge
- Postpartum visits converted to telemedicine

## Worsening the challenge of rapid repeat pregnancy

- MA unintended preg rate: **40 per 1,000 women** aged 15–44
- **47%** of all pregnancies unintended

## Vulnerable populations at higher risk

Telehealth may affect ability to counsel patients

# Do you currently offer IUD and implant placement for postpartum patients?

- A. Yes, **both devices**, for all patients
- B. Yes, either IUD or implant, for all patients
- C. Yes, **both devices**, for patients with MassHealth only
- D. Yes, either IUD or implant, for patients with MassHealth only
- E. Yes, but only for patients with high medical need
- F. Yes, some other process
- G. No

# Partners in Contraceptive Choice and Knowledge (PICCK)

EOHHS-funded 5-year program

## Massachusetts birth hospitals

- Direct engagement
- Statewide activities (webinars, annual meeting Sept 2020)
- Resources ([www.picck.org](http://www.picck.org))

## COVID-19-related programming

- Webinar – *Contraception in the Time of COVID-19*
- Telemedicine Best Practices
- Accessing Birth Control Without a Visit
- Upcoming webinar on reopening services

# PICCK and Immediate Postpartum LARC

## Group presentation

- Grand rounds
- Nursing education

## Champion efforts

- Protocol adoption
- Aligning with stakeholders
- Pharmacy, billing

## Resources

- Champion toolkit
- Printed resources

**PICCK** INSERTION OF IUD IMMEDIATELY POST VAGINAL DELIVERY 

### PROCEDURE FOR IMMEDIATE POST-PLACENTAL IUD INSERTION DURING VAGINAL DELIVERY

1. **Ultrasound guidance MUST be used for insertion.** Bring ultrasound into the room when delivery is imminent.
2. **Perform vaginal delivery per routine practice,** including routine uterotonics.
3. **Provide routine care after delivery of the placenta** (removal of membranes, control of bleeding, etc.) and ensure that adequate hemostasis has been attained and that the uterus is not atonic.
4. **Consider performing IUD insertion prior to repair of perineal lacerations,** though lacerations that are actively bleeding may need urgent repair.
5. **The RN will open the IUD packaging** directly onto the delivery tray. *Waiting until this point avoids opening the IUD until it is sure to be placed, so it is not wasted if unable to be placed for any reason.*
6. **The clinician will change gloves,** then place a bivalve or Sims speculum into the patient's vagina to expose the cervix and cleanse the cervix and vagina with Betadine.
7. **Follow insertion guidelines for the specific IUD type.**

HORMONAL IUD INSERTION	COPPER IUD INSERTION
<p><b>Slide back the flange (ring)</b> all the way to the handle.</p> <p><b>Bend the inserter</b> at the base of the sheath just above the handle to facilitate insertion.</p> <p><b>Pass the inserter into the lower uterine segment under ultrasound guidance,</b> and pull back the slider until the top of the slider reaches the mark (raised horizontal line on the handle).</p> <p><b>Wait 10 seconds, then advance</b> the inserter to the uterine fundus.</p> <p><b>Pull the slider all the way back,</b> releasing the IUD at the fundus, then carefully remove the inserter from the uterus.</p> <p>If the inserter is defective, or is too short (as may be the case with obese patients), the IUD may also be inserted using ring or ovum forceps, as outlined in Copper IUD Insertion.</p> <p><b>Trim the strings</b> of the IUD at the level of the cervix.</p>	<p><b>Remove the IUD</b> from the inserter.</p> <p><b>Using an ovum/placenta forceps,</b> grasp both the stem and the arm of the IUD. <i>Do not use a ring forceps.</i> It will not be long enough to reach the fundus.</p> <p><b>Place the IUD at the fundus</b> under ultrasound guidance.</p> <p><b>Open the forceps,</b> allowing the IUD to remain at the fundus.</p> <p><b>Remove the forceps carefully,</b> by gliding the forceps against the uterine side wall, keeping them open so as to not inadvertently grasp the strings or the IUD.</p>

8. **Do not inadvertently remove the IUD** when removing instruments from the vagina.
9. **Use ring forceps as a tenaculum** on the cervical anterior lip, if assistance is needed in passing the inserter or forceps through the lower uterine segment.
10. **Uterine (abdominal) massage** is permitted—*do NOT manually express the uterus* of clots after the IUD is placed. Uterotonics may be given as medically indicated.

Partners in Contraceptive Choice and Knowledge (PICCK) is a five-year program funded by the Executive Office of Health and Human Services, Commonwealth of Massachusetts and housed at Boston Medical Center/Boston University School of Medicine.

# PPLARC Implementation

## Process measures

- How many trainings
- % of staff trained
- Credentialing

## Outcome measures

- Protocol adopted
- Devices available
- Uptake (devices placed!)

## Qualitative data

PPLARC	
Goals/Tasks	PICCK Contribution
<b>Providers:</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> Knowledge about how to:               <ul style="list-style-type: none"> <li><input type="checkbox"/> Counsel for PPLARC during prenatal care</li> <li><input type="checkbox"/> Obtain consent and transfer to L&amp;D</li> <li><input type="checkbox"/> Place PPIUD in all 3 insertion scenarios (at VD, at c/section, during postpartum days)</li> </ul> </li> <li><input type="checkbox"/> Comfort in their skills in immediate postpartum IUD placement</li> </ul>	<ul style="list-style-type: none"> <li>• Grand rounds</li> <li>• Insertion training</li> <li>• Webinar</li> <li>• Infographics (timeline of counseling and consent; three insertion scenarios)</li> <li>• Resident presentation</li> </ul>

# PPLARC Best Practices

Takes longer than you expected

Don't forget to align with stakeholders *early*

Balancing measures to ensure reproductive justice and guard against coercion

- *Counseling during prenatal care (30-32 weeks)*
- *Counseling metrics*
- *Going home with a method (not just LARC)*

Think about sustainability from the beginning

- *Training of new staff*

# Thank You

## **PICCK Administrative Team**

Natasha Lerner, *Program Director*

Kristina Tavilla, *Program Manager*

## **PICCK Core Team**

Dr. Ronald Iverson, Dr. Audra Meadows, Dr. Julie Potter,  
Roshia Forman CNM, Anissa Dickerson CNM, Megan  
O'Brien RN, Ginny Combs RN
